## FOREWORD

Praise the compilers for the presence of Allah SWT because thanks to the abundance of grace and guidance, the compilers have the opportunity to complete the final individual report on Real Work Lecture (KKN). As a form of responsibility, to fulfil the task of the Community Service Program for COVID-19, Padang State University (UNP) for the 2020 Academic Year. Salawat and greetings are conveyed to the Prophet Muhammad SAW, who has brought humans from the dark ages to the bright ages. Hopefully, the intercession will flow to us in the final yaumul. Aamiin.

Final Report on Individual Community Service Program in Jorong Sungai Sariak Kenagarian Koto Tinggi, made based on the results of observations and implementation in the field. The compilers are aware that the activities that have been carried out will not run optimally without the help of various parties. Therefore the compilers would like to thank:

1. Mr Prof. Drs. Ganefri, M.Pd, Ph, D. as the Rector of Padang State University
2. Mr Prof. Dr. Yasri. M.S. as the head of the LPPM Padang State University
3. Mr Dr. Elfi Tasrif. MT. as the head of the Community Service Center for the State University of Padang
4. Mr Drs. Hendri, MT, Ph.D as field supervisor (DPL) KKN State University of Padang
5. Mr Geginda as Walinagari Koto Tinggi who has permitted to carry out KKN
6. Mr. Jonni Wandri as the Head of Jorong Sungai Sariak;
7. Jorong Sungai Sariak Youth Kenagarian Koto Tinggi;
8. All residents of Jorong Sungai Sariak Kenagarian Koto Tinggi;
9. Collaborative KKN colleagues UNP UNAND and IAIN Kenagarian Koto Tinggi;
10. All participants of the Padang State University (UNP) COVID-19 DARING KKN (UNP) Academic Year 2020;
11. Family compilers who have provided support and prayers during the activity process.

With all humility, the compilers hope that the program that has been implemented can benefit the community in general and for students in particular. Hopefully, the preparation of this final report can be used as an evaluation material and useful. Aamiin.

Koto Tinggi, 24 July 2020

## INTRODUCTION

Real Work Lecture Activities (KKN) are a form of community service carried out by students in interdisciplinary, institutional, and partnership ways as a form of higher education tridharma activities. With the KKN, what has been received during lectures can be applied directly to the community. With this KKN, it is hoped that it can increase the attitude of independence and teamwork for students. KKN activities can complement students' self-empowerment toward professional competence. With KKN activities, students are expected to be able to devote themselves to the community by capitalizing on the knowledge obtained from lectures.

Referring to the Government Policy of the Republic of Indonesia, through the Directorate General of Higher Education, Ministry of Education and Culture stipulates that the teaching and learning process policy is carried out online. Responding to this policy, Padang State University implemented an online KKN called the Covid-19 KKN Assimilation Activity Program (Covid-19 KKN). Thus, the implementation of the KKN has undergone an adjustment, which was initially made directly into an online KKN program.

Padang State University as a higher education institution that will implement KKN equips students with various sciences, technology and arts according to their fields of study and their implementation in social life. To bring closer understanding and practice in community life, students are directly involved in handling the Covid-19 pandemic that arises in the community. They are given the opportunity to play a role in finding solutions or solutions to solve problems faced by the community so that they will add valuable experiences both directly individually and collectively.

The Covid-19 KKN was carried out to help the community during the current Covid-19 epidemic. Real Work Lecture (KKN) is one of the compulsory courses of Padang State University, thus in accordance with government policies and Padang State University leaders, KKN is also carried out online. This change causes the KKN tradition that is usually carried out in different villages from the

student's home region to be adjusted to become an online KKN in the student's town. This Community Service Program was held on 23 June - 24 July 2020.

This KKN activity was carried out in Jorong Sungai Sariak Kenagarian Koto Tinggi, Baso District, Agam Regency, West Sumatra Province. In general, the condition of Jorong Sungai Sariak Kenagarian Koto Tinggi can be identified by conducting field observations which are the first step to obtain data on the state of the community and local environmental conditions during the face of Covid-19, this is intended so that the program is made according to the needs of the local community. Observations were made a week before the Community Service Program started by asking directly to the Nagari Koto Tinggi apparatus, the head of the Sariak River Jorong, the Sariak River Jorong Youth Chair, and the Sariak River PKK head. The general description of the situation and condition of the community and how to handle covid-19, Jorong Sungai Sariak Kenagarian Koto Tinggi, Baso District, Agam Regency is as follows:

#### 1. Geographical Location and Territorial Boundary

Kenagarian Koto Tinggi has a Village / Kelurahan code of 1306082001, with an area of 1860 hectares, located with longitude coordinates of 100.49472 and latitude coordinates -0.317361, at an altitude of 1400 meters. Kenagarian Koto Tinggi is not included in the outer villages / kelurahan in Indonesia or in the province but includes the outermost villages / kelurahan in regencies / cities and sub-districts. Kenagarian Koto Tinggi is divided into six Jorong, each led by the head of the Jorong, with nearly a thousand heads of families.

Jorong Sungai Sariak is part of Kenagarian Koto Tinggi, Baso District, Agam Regency, West Sumatra Province. Jorong Sungai Sariak is located about 3 kilometers from Kenagarian Koto Tinggi, 13 kilometers from downtown Bukittinggi and 103 kilometers from the city center of West Sumatra Province. The boundaries of the Jorong Sungai Sariak area are as follows:

- a. North side: Jalan Raya Lintas Sumatra and Kenagarian Tabek Panjang
- b. South side: Jorong Ladang Hutan
- c. West side: Jorong Koto Tinggi
- d. East side: Kenagarian Padang Tarok

## 2. Natural Conditions and Regional Potentials

The natural condition of Jorong Sungai SariaK Kenagarian Koto Tinggi is still quite beautiful because there are still many trees along the roads and in the yards of residents' houses. Also, the Jorong Sungai SariaK Kenagarian Koto Tinggi is dominated by rice fields and plantations. Jorong Sungai SariaK is classified as an urban area that is traversed when heading to the city of Bukittinggi, besides that, Jorong Sungai SariaK is located on the edge of Jalan Raya Lintas Sumatra so that it is used as an alternative road if it is jammed on significant days such as holidays and holidays. The access road to Jorong Sungai SariaK is paved and easily accessible by motorized vehicles. The potential of Jorong Sungai SariaK is that agriculture, fields, trade and livestock can be used as livelihoods for the community.

## 3. Socio-Cultural Conditions

In general, the people of Jorong Sungai SariaK work as farmers, laborers and traders. The community organization in Jorong Sungai SariaK is quite good. This can be seen from the number of organizations formed such as PKK, Posyandu, Farmers Group, Mosque Youth, Dasawisma Group and Tribal Group.

## 4. Community Potential

The majority of the people in Jorong Sungai SariaK are farmers, laborers or workers, some are civil servants, traders and breeders. Jorong Sungai SariaK has a very active community in terms of activities, such as PKK, Posyandu, Farmers' Groups, Youth Mosques, Dasawisma Groups, Tribal Groups and other associations.

## 5. Religious Life

All residents in Jorong Sungai SariaK are diverse in Islam. Religious activities in Jorong Sungai SariaK can be said to be fair, seen from the recitation activities at the mosque which are often carried out, the actions of Majelis Taklim women, the existence of MDA Nurul Hidayah, the presence of the Tahfidz House for children to learn and memorize the Al-Quran and other spiritual activities. Religious activities in Jorong Sungai SariaK are not concentrated in one place, as can be seen from every recitation activity that is sometimes carried out in people's homes.

## 6. Handling Covid-19

Most of the people of Jorong Sungai Sariak have started to understand how dangerous Covid-19 is and the importance of implementing health protocols in anticipation of Covid-19. Jorong officers together with community leaders of Jorong Sungai Sariak continue to urge and provide socialization and education to the community. At the gates of the Access Road to Jorong Sungai Sariak a Portal was created that restricts people from other areas from freely entering and leaving them, there is also a place to wash hands and masks so that health protocols are adequately maintained. This portal is guarded by youths and family heads in Jorong Sungai Sariak alternately by dividing the picket schedule, so that the doorway at the gate to Jorong Sungai Sariak is always guarded 24 hours.

In addition to limiting access in and out of Jorong Sungai Sariak, there are also activities of spraying disinfectants throughout the residents' houses and yards, appeals to stay at home only if there is no urgent need and always wear a mask when leaving the house. Religious activities such as Friday prayers, congregational prayers at the mosque, recitation activities and other religious activities are temporarily carried out at home. Besides, there are various types of social assistance to the Jorong Sungai Sariak community, namely in the form of direct cash costs (BLT), distribution of basic necessities and various free health facilities.

Even though there have been many calls about covid-19, there are still people who have not followed established health protocols like forgetting to use a mask when travelling outside the house and still gossiping in public places like in the market, even though the market is one of the places with the greatest potential for the spread of Covid-19.

## **DESCRIPTION OF ACTIVITIES**

### **A. Activities undertaken**

Based on observations made a week before the implementation of the Community Service Program, it is known the condition of the Sariak River Jorong so that it becomes a guide in implementing the KKN program. In the preparation of the KKN program, there are things that are used as guidelines, namely as follows:

- a. The program to be implemented is adjusted to the direction of the State University of Padang, is also adapted to the needs of Jorong Sungai Sariak and supports community activities and Kenagarian activities of Koto Tinggi.
- b. The program to be implemented was approved by the Wali Nagari Koto Tinggi and the Head of Jorong Sungai Sariak.
- c. The program to be carried out is adjusted to the ability of the combined KKN group UNP, UNAND, and IAIN Kenagarian Koto Tinggi for the 2020 academic year.
- d. Availability of adequate facilities and infrastructure.
- e. Allocation of time and allocation of funds available.

Based on the above matters, several problems can be taken which are then raised to become the KKN work program. The arrangement of activities carried out during the Community Service Program in Jorong Sungai Sariak Kenagarian Koto Tinggi are as follows:

#### **1. Socialization and education related to Covid-19 to schools**

Entering the New-Normal era, the Education Office allows back to face-to-face learning but still has to pay attention to health protocols. For this reason, it is necessary to hold socialization and education related to Covid-19 to schools.

This covid-19 socialization and education activity was carried out at one of the elementary schools in Kenagarian Koto Tinggi, namely SD N 12 Koto Tinggi, in collaboration with the school principal and teachers. Not only socialization about covid-19 but also teaching how to wash

hands properly and check body temperature before entering the activity room.

Documentation of covid-19 socialization and education activities

## 2. Socialization and education related to Covid-19 in the form of making posters

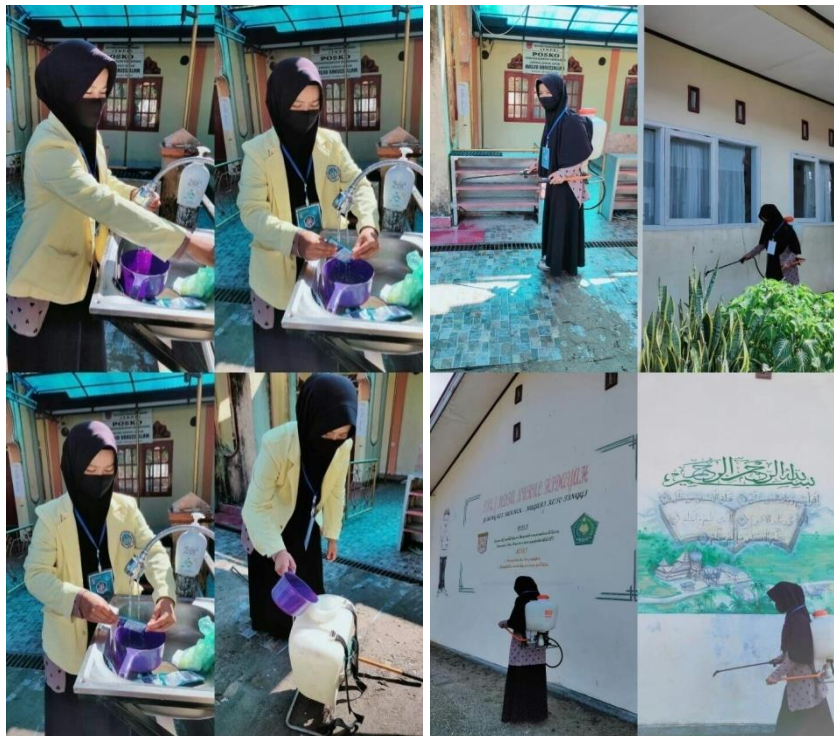

Covid-19 education outreach activities in the form of making and distributing posters feel essential to do considering the lack of public understanding of the dangers of Covid-19 and how to deal with it. This activity is carried out by sticking posters in public places such as mosques, stalls and schools. Signs were also distributed to drivers passing on the Sariak River road, then also spread to the surrounding community. In the photo, posters were seen being distributed to mothers taking their children to MDA.

### 3. Making and spraying disinfectants

Disinfectants are chemical compounds that can kill viruses by penetrating the virus walls and will damage the inside of the virus. Disinfectant solutions can be made from liquids commonly used in households such as clothes bleach and floor cleaning solutions which are then mixed with water in a specific ratio.

Spraying of disinfectant is carried out in public places that are visited by many people, and this activity is carried out evenly in the six existing jorong known as Koto Tinggi by dividing the working groups. I sprayed disinfectant at Darussalam Sungai Sariak Mosque and MDA Nurul Hidayah Sungai Sariak.

Documentation of disinfectant manufacturing and spraying activities

#### 4. Free distribution of the mask/face shield

Masks are one of the personal protective equipment (PPE) that must be used by society today. The face masks that are recommended for use by the general public are masks made of cloth and do not use medical masks. The use of medical masks is only for medical personnel and workers who work in the hospital environment. Masks made of cloth can be used by healthy people in public places.

We work with mask tailors to get cloth masks with good quality but at affordable prices. The masks that are distributed to traders in the market are cloth masks; the advantage of wearing cloth masks is that they can be washed and can be reused. The mask distribution activities were carried out in Baso Market and Koto Tinggi Market, why are they only distributed in markets because the market is a place that is crowded with people and has the potential to spread Covid-19 very quickly.

Documentation of making cloth masks

Distribution of masks at the Baso Market and Koto Tinggi Market

## 5. Manufacture and installation of automatic hand washer

This automatic hand washing device is controlled by an infrared sensor. This sensor will operate when it detects human skin. So that when the hand is directed at this sensor, the sensor will give a signal to move the pump automatically.

The tool components needed include the following:

### a. Electrical Components

InfraRed (IR) sensor

- IC 7805
- Reducing Voltage
- DC 12 V adapter
- Air Pump.
- Relay 1 Channel 5 Volt
- Relay Delay Timer

- Jack cable (in & out)
- Water pump

b. Frame Components

- Washbasin
- Water containers / tanks
- Soap Hose
- Water hose
- Light steel
- Lead
- Ti cable

In the manufacture of this automatic hand washing device, the components of the frame are done at the beginning and then the electrical components because the electrical components must be ordered in advance. The first step in making the frame is making the design and measurement, after getting a definite size, it is followed by cutting the frame using a grinder. After the frame is cut into pieces, it is assembled and put together with a drilling machine and keeling nails.

Documentation of the activity of making automatic hand washer frames

After the frame components are finished, then proceed with the installation of the electrical components. Then the testing of the tools is carried out. Testing of the tools needs to be done and also the need for sensor settings in outdoor and indoor conditions because infrared sensors are susceptible to sunlight.

Documentation of electrical components installation and testing of tools

Documentation of the inauguration of the automatic hand washing device by Wali Nagari Koto Tinggi

## 6. Cleaning the mosque and the Jorong office

The cleaning of the mosque and the jorong office was carried out evenly in the six existing jorong areas in the Koto Tinggi area by dividing the working groups. This activity is carried out to mingle with the community and contribute to the importance of maintaining health and hygiene in the community of Jorong Sungai Sariak.

Documentation of cleaning activities at the Darussalam Sungai Saria Mosque

Documentation of cleaning activities at the Jorong Sungai Saria Office

7. Contribute to the work program of Jorong, Posyandu and PKK

The forms of activities when working with Jorong are in the form of data collection on the underprivileged community, data collection on people who do not have a Healthy Indonesia Card, distribution of free BPJS cards, distribution of Direct Cash Costs (BLT) and distribution of basic necessities to the Jorong Sungai Saria community who are entitled to receive assistance.

Documentation of BLT distribution activities

The contribution of KKN students to Posyandu activities received positive reactions from the community because the existence of Posyandu assistance carried out by KKN students made Posyandu services to the Jorong Sungai SariaK community faster and more effective.

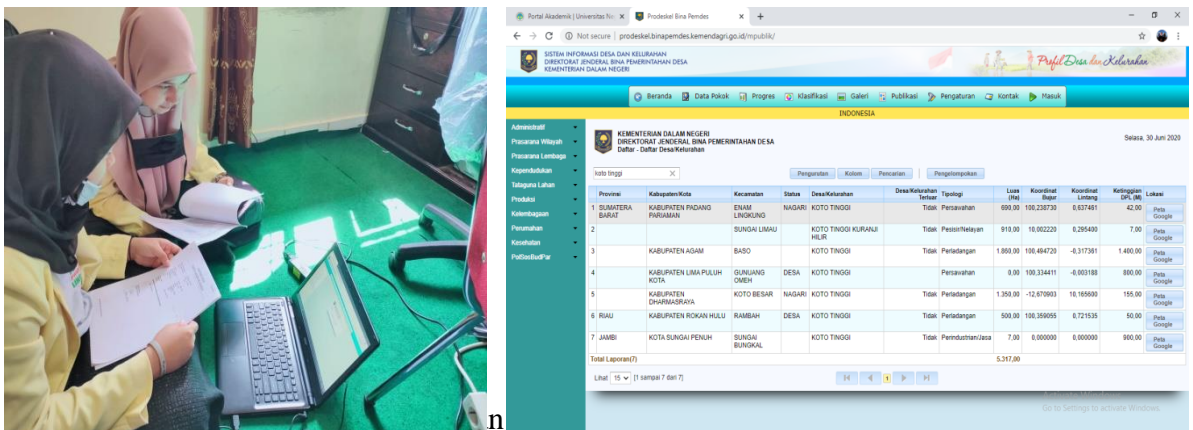

Documentation of Posyandu activities

KKN students also held morning exercise activities for the Jorong Sungai SariaK community in collaboration with PKK families. They happened to have the opportunity to work with Lecturers from Stikes Perintis Padang in their activity "Community Service Lecturers for the Professional Study Program Nurse Printis Padang". After the morning exercise, it was continued with health socialization activities, tension checking and free blood sugar checking and then closed with the distribution of free packaged rice. The entire community of Jorong Sungai SariaK was very enthusiastic and enthusiastic in participating in this series of activities.

Documentation of activities with PKK members

8. Contributing to the Koto Tinggi Kenagarian work program
9. Kenagarian's handling of the impact of Covid-19 has been carried out well in each of the six Jorong's in Kenagarian Koto Tinggi. Wali Nagari Koto Tinggi responded positively to every activity carried out by KKN students, especially those related to handling the impact of Covid-19. Kenagarian also gives special assignments to students of the combined KKN UNP, UNAND and IAIN, namely inputting data of all families in Koto Tinggi Kenagarian to create a profile of the Koto Tinggi village through the [prodeskel.binapemdes.kemendagri.co.id](http://prodeskel.binapemdes.kemendagri.co.id) portal.

## B. Capaian setiap kegiatan

The achievements of each activity carried out during the KKN are as follows:

### 1. Socialization and education related to Covid-19 to schools

Socialization and education about Covid-19 to schools went smoothly and was well received by the school and the local community, especially parents, guardians of students and students at school. Socialization and education activities related to Covid-19 were carried out at SD N 12 Koto Tinggi. The school, along with the guardians of students and students at SD N 12 Koto Tinggi are very enthusiastic and eager to participate in this covid-19 socialization and education activity. Socialization and education activities related to Covid-19 were carried out in classrooms by adjusting student seat distances and still paying attention to health protocols. Before entering the room, the students of SD N 12 Koto Tinggi were given education on how to wash their hands properly and then it was immediately practised. After washing their hands, it was continued with data collection and checking the body temperature of SD N 12 Koto Tinggi students,

only then were students allowed to enter the classroom to participate in socialization and education related to Covid-19.

This socialization and education activity related to Covid-19 took place from 09.00 - 11.00 WIB, students of SD N 12 Koto Tinggi seemed enthusiastic in participating in this activity as seen from the many questions that emerged during the discussion. In the middle of the event, SD N 12 Koto Tinggi students were given health posters during the Covid-19 pandemic and also snacked so that activities were more interesting and students were more enthusiastic.

## 2. Socialization and education related to Covid-19 in the form of making posters

The socialization and education activities related to Covid-19 in the form of making this poster went smoothly. These posters were distributed by means of being pasted up in public places such as mosques, MDAs, schools and stalls, then also spread to the public and posted on social media

## 3. Making and spraying disinfectants

The activity of making and spraying this disinfectant went well and received a good response from the community, especially the mosque management and the MDA Jorong Sungai Sariak management. This disinfectant manufacturing and spraying activity was carried out at Darussalam Sungai Sariak Mosque and MDA Nurul Hidayah Sungai Sariak.

## 4. Free distribution of the mask / face shield

The distribution of these free masks went well and received a positive response from the public. The distribution of free masks was carried out to traders who did not wear masks at the Baso Market and the Koto Tinggi Market. The reason why free masks are distributed in markets is that after previous observations the market is a place that is crowded with people and it does not rule out that a market is a place for the spread of Covid-19 which is very fast, besides that many traders in the market do not wear masks. when selling serve buyers

## 5. Manufacture and installation of the automatic hand washer

The manufacture and installation of automatic hand washers went smoothly and received very good appreciation and response from Kenagarian Koto Tinggi. The manufacture and placement of this automatic handwashing device were

carried out at the Koto Tinggi Nagari Wali Office. The working principle of this automatic handwashing device is to use a sensor so that only holding the hand close to the sensor, water and soap will come out automatically and stop automatically too.

6. Cleaning the Mosque and Government Office of Jorong Sungai SariaK Kenagarian Koto Tinggi.

The cleaning activities for the Mosque and Jorong Office went well and received positive reactions from the community. This activity was welcomed by the community, especially the mosque administrators and the head of the Jorong. This activity was carried out at the Darussalam Sungai SariaK Mosque, the Jorong Sungai SariaK Office and at the Kasih Ibu Sungai SariaK Kindergarten on different days and times according to the schedule and other KKN activities.

7. Contribute to the work program of Jorong, Posyandu and PKK

This activity ran smoothly and received a positive response from the community. Contributing to the work program of Jorong, Posyandu and PKK here means being involved in every social activity in Jorong Sungai SariaK in collaboration with Mr. Jorong, Posyandu cadres and PKK Jorong Sungai SariaK women.

8. Contributing to the Koto Tinggi Kenagarian work program

This program ran smoothly and received appreciation from Kenagarian Koto Tinggi because it reduced the burden of Nagari equipment in inputting family data quite a lot. Besides, inputting this data will make it easier for the public to later access the data in Kenagarian Koto Tinggi.

C. Constraints encountered

The obstacles faced in each activity carried out during the Community Service Program are as follows:

1. Socialization and education related to Covid-19 to schools

The obstacle faced during the implementation of socialization and education about Covid-19 was that KKN activities coincided with semester breaks at school, so it was difficult to manage schedules. The socialization and education activities related to Covid-19 should be carried out in all schools in Koto Tinggi

Kenagarian. Still, due to the semester holiday, it was added to the decision of the Agam Regency Education Office which does not allow face-to-face learning activities. Always, it must be done online or online, so activities socialization and education related to Covid-19 can only be done in one school.

## 2. Socialization and education related to Covid-19 in the form of making posters

The obstacle faced in socialization and education activities related to Covid-19 in the form of making this poster is in making the poster itself. Not many students of Koto Tinggi KKN can design, and even if they do, sometimes the designs are not so good that they don't attract readers.

## 3. Making and spraying disinfectants

Constraints faced in the activities of making and spraying disinfectants are the method of making the disinfectant itself because they do not understand the proper dosage and method of making disinfectants. Besides, for spraying this disinfectant, an ordinary tank is used to spray heavy plant toxins when used.

## 4. Free distribution of the mask/face shield

The obstacle faced when distributing free masks, namely raising funds to buy masks and finding a place to manufacture masks is a little tricky because every tailor is working on a large order of masks. In addition, the masks that were distributed were not enough so that some traders who did not wear masks did not get masks, even though ten dozen masks were distributed.

## 5. Manufacture and installation of the automatic hand washer

Constraints faced in the manufacture and installation of automatic handwashing devices were related to manufacturing time and funds, because Kenagarian did not provide assistance funds for the manufacture of this device, besides that, funding proposals were not allowed. To make this automatic handwashing device requires a lot of funds because there are a lot of tools and materials that have to be purchased at a fairly high price, to make this automatic hand washing device costs around Rp. 1,000,000, -. Also constrained at the time of manufacture because there are some tools that can only be obtained in Padang and some are purchased online, so you have to wait to be able to continue making this automatic hand washing device.

6. Cleaning the mosque and government offices of Jorong Sungai Sariak Kenagarian Koto Tinggi.

The obstacles faced during the activities of cleaning the mosque and the Jorong Office are regarding the timing and distribution of activities throughout the area in Kenagarian Koto Tinggi. Koto Tinggi consists of six jorong which have their respective mosques and jorong offices, so it would be time consuming to clean up all the mosques and the jorong office in Kenagarian Koto Tinggi.

7. Contribute to the work program of Jorong, Posyandu and PKK

The obstacle that arose in the activities with the Head of Jorong Sungai Sariak was the lack of information regarding the data on the community who received health assistance. For example, when the Head of Jorong gave the task of distributing free BPJS cards to the public. KKN students do not know who this person is because in Jorong Sungai Sariak they use "gala" as a special nickname given to a married man, while the name written on the BPJS card is the recipient's real name.

The obstacles faced during the Posyandu activity were more for toddlers who cried when weighed or when they were given immunizations, besides that some mothers did not follow the administrative flow that had been determined so that some data was incomplete.

The obstacle faced in joint exercise activities and blood pressure and blood sugar checks are the cultures of queuing and continuing to carry out health protocols. Mothers want to scramble for the first order of the examination, then sometimes hang out in groups without wearing masks so that it violates the Covid-19 health protocol.

8. Contributing to the Koto Tinggi Kenagarian work program, especially in efforts to deal with the impact of Covid-19

The obstacles encountered during data entry included the large amount of data that had to be inputted because there were nearly a thousand heads of families in Koto Tinggi Kenagarian and the data had to be inputted one by one. Another obstacle faced is the rather tricky internet network while data is input via a portal on the internet.

#### D. Solutions provided

The solutions provided for each problematic activity carried out during the Community Service Program are as follows:

##### 1. Socialization and education related to Covid-19 to schools

The solution has taken so that socialization and education activities related to Covid-19 can still be carried out, namely by discussing with the school of SD N 12 Koto Tinggi. The school is very enthusiastic about the activities of KKN students in providing socialization and education related to Covid-19 to their students. The school determines one day when all students are asked to come to school to take assignments while studying at home. Coinciding with that day the school allowed to promote socialization and education activities related to Covid-19 for students of SD N 12 Koto Tinggi.

##### 2. Socialization and education related to Covid-19 in the form of making posters

The solution to dealing with obstacles in making covid-19 posters is by learning poster design from the internet and asking a friend from the Visual Communication Design department to help create exciting posters.

##### 3. Making and spraying disinfectants

The solution to the control of disinfectant manufacturing and spraying activities is to find more information on the internet and from reference kinds of literature related to the correct manufacture of disinfectants. For the problem of tanks that are quite heavy when used to spray disinfectants, namely by filling the tank halfway so that it feels lighter when used.

##### 4. Free distribution of the mask/face shield

The solution to the financial constraints in distributing free masks is with contributions from each of the combined KKN students of UNP, UNAND and IAIN Kenagarian Koto Tinggi. Then for the problem of sewing masks which are full of orders, namely by participating in learning, helping and contributing to the making of these masks, so that the tailor's work is slightly reduced and the making of masks is completed more quickly. Meanwhile, to overcome the shortage of masks during distribution in the field, a solution was found by distributing health

posters and covid-19 posters, so traders who did not get free masks would get posters.

5. Manufacture and installation of the automatic hand washer

The solution to the financial constraints in making this automatic handwashing device is the contribution from each of the combined KKN students of UNP, UNAND and IAIN Kenagarian Koto Tinggi. The solution to the problem of a long time in making this tool is by dividing the work and doing gradually what can be done first. Representatives of KKN members go to Padang to buy the tools they need. While waiting for the ordered tools to arrive, proceed with making the framework of the devices first, so that later it remains only to assemble and combine the tools.

6. Cleaning the mosque and government offices of Jorong Sungai Sariak Kenagarian Koto Tinggi.

Kenagarian Koto Tinggi consists of six jorong that have their respective mosques and jorong offices. To overcome the obstacles regarding cleaning the mosque and the jorong office, a team of five to six people is divided per Jorong so that this activity can be carried out evenly in every Jorong in Koto Tinggi Kenagarian.

7. Contribute to the work program of Jorong, Posyandu and PKK

The solution to the difficulty of finding out which community is receiving assistance is to ask the local community and then match the “gala” with the beneficiary's real name.

The solution to the problems faced during the posyandu is to condition the crying toddler as best as possible, invited to play first and then weighed and given immunization. For mothers who do not follow the administrative flow correctly, namely by matching data on mothers and children data, adding what has not been carried out and evaluated what activities have been carried out.

8. Contributing to the Koto Tinggi Kenagarian work program, especially in efforts to deal with the impact of Covid-19

The solution to the problems faced during filling in family data for the Koto Tinggi village profession is by sharing the family data that must be inputted to all

students of the combined KKN UNP, UNAND and IAIN Kenagarian Koto Tinggi, carried out together so that this task is not too heavy. The problem with the complex network while in the village was by replacing cards that had good network quality so that the family data entry process was completed more quickly.

## CONCLUSIONS AND SUGGESTIONS

### A. Conclusion

KKN is a vehicle for students to apply their knowledge and skills directly, and feel, carry out activities in society, mainly how to deal with Covid-19 during the pandemic. Through KKN, students can learn to socialize and devote themselves to the community. The programs implemented in the KKN have been adapted to the needs and conditions of the local community based on observations before the KKN program has been implemented and all planned programs have been implemented to the maximum extent possible.

During the implementation of KKN, the KKN Team gained a lot of experience about community life, especially how to carry out activities to deal with Covid-19 in Jorong Sungai Sariak Kenagarian Koto Tinggi, developing areas of expertise and also taking an active role in character building through attitudes, behaviour and speech that can be role models for citizens. In addition, KKN students also learn how to interact with the community. The detailed analysis of the implementation of the KKN program in Jorong Sungai Sariak Kenagarian Koto Tinggi is as follows:

- 1) The implementation of KKN activities in Jorong Sungai Sariak Kenagarian Koto Tinggi cannot be separated from the good cooperation between KKN students and the community in carrying out activity programs in an effort to deal with Covid-19.
- 2) There is attention and support from Kenagarian in every covid-19 KKN activity program.
- 3) The availability of supporting facilities and infrastructure to facilitate each KKN activity program
- 4) The ability of students who are competent in their fields so that they are beneficial to the wider community.
- 5) Considering the effectiveness and efficiency of each activity program.

The implementation of KKN in Jorong Sungai Sariak is expected to be able to help the community in dealing with Covid-19 and open the minds of people who do not understand how dangerous Covid-19 is. In addition, KKN is also

expected to develop the quality of society, for example towards development growth, health, education and economic growth.

In general, the implementation of the Covid-19 Real Work Lecture (KKN) in Jorong Sungai Sariak, Kenagarian Koto Tinggi, Baso District, Agam Regency, West Sumatra Province in 2020 went well and smoothly. The program that has been implemented has complied with the Covid-19 health protocol. The participation and support from the village and the community are quite high, where the community is actively involved in implementing the program so that the community can take full advantage of it.

## B. Suggestions

During one month the KKN activities take place, of course, there are various kinds of mistakes, to reduce mistakes in the future the compilers provide suggestions including:

1. It is necessary to have mental, physical readiness, emotional maturity and funds so that KKN can run well and smoothly.
2. There needs to be good coordination and good cooperation between personnel and groups so that work programs can run smoothly.
3. In implementing work programs, the efficiency of time, costs, and energy should be considered so that all programs can be carried out effectively.
4. In the implementation of each program, careful planning must be done and do more coordination between students and community members.

**A. Catatan Harian**

*Kegiatan pertama di hari kedua KKN yaitu menghadiri pertemuan dengan Wali Nagari Koto Tinggi dan jajarannya.*

Bapak Wali Nagari mengundang masing-masing Kepala Jorong dari 6 Jorong yang ada di Kenagarian Koto Tinggi, dan mengundang seluruh mahasiswa yang KKN pada periode satu bulan kedepan (dihadiri mahasiswa KKN dari UNP, UNAND, IAIN, dan UPI) untuk diberikan pengarahan dan bimbingan selama KKN berlangsung. Kegiatan ini dilaksanakan di balai pertemuan Kenagarian Koto Tinggi dengan tetap memperhatikan protocol kesehatan (memakai masker dan menjaga jarak aman). Sebelum pertemuan di kantor Wali Nagari, kami mahasiswa KKN gabungan UNP dan UNAND telah merancang program kerja untuk satu bulan kedepan. Bapak Wali nagari meminta untuk menyebutkan dan menjelaskan program kerja yang sudah dirancang sebelumnya dan Beliau sangat setuju serta sangat mendukung rancangan program kerja yang sudah dibuat. Beliau memberikan masukan-masukan untuk program kerja kami dan memberikan satu program khusus untuk membantu pekerjaan Kenagarian Koto Tinggi yaitu untuk menginput data seluruh Keluarga yang ada di Kenagarian Koto Tinggi untuk keperluan Profile Nagari. Penginputan data keluarga ini menggunakan website khusus kenagarian. Kegiatan ini berlangsung selama kurang lebih dua jam dari pukul 10.00-12.00 WIB

Kegiatan kedua dihari kedua KKN yaitu diskusi dan pembahasan perbaikan program kerja gabungan mahasiswa KKN UNP UNAND dan IAIN. Dilaksanakan pada pukul 13.00-16.00

**7 Langkah**  
**MENCEGAH PENYEBARAN COVID-19**

01. Cuci tangan Anda sesering mungkin
02. Hindari menyentuh mata, hidung, dan mulut Anda
03. Tutup mulut ketika batuk menggunakan siku atau tisu
04. Hindari tempat yang ramai dan kontak dekat dengan siapa pun yang mengalami demam atau batuk
05. Tetaplah di rumah jika Anda merasa tidak sehat
06. Jika Anda menderita demam, batuk, dan sulit bernapas, segera minta pertolongan medis — tetapi teleponlah terlebih dahulu
07. Dapatkan informasi dari sumber terpercaya
